

Chainsaw Training UK Ltd

Equipment required for felling trees over 380mm

As with all chainsaw units you will require the necessary PPE, 2-stroke fuel, chain/bar oil and chainsaw operators manual. In addition you will require:

- Chainsaw with guide bar of no more than 15" (380mm). 50cc to 75cc advisable.
- 2 x alloy hi-lift wedges.
- Sledge hammer/maul for beating wedges.
- Hand winch with minimum pull capacity of 1.6ton and at least 15m of cable.
- Gloves for handling wire winch rope/cable. Leather rigger gloves or similar best.
- 2 x 2m or 3m slings/strops rated to at least 2ton or preferably above.
- 1 x 5ton strop
- 3.2ton minimum capacity pulley designed to take a wire rope/cable rated to the same diameter cable of the winch.

The strops/slings are to attach the winch, cable and pulley to anchor trees. Depending upon compatibility you may require 3 shackles rated at 3.5ton or above for connection.

Please contact for clarification on any of the above.
